

BayBatt Graduate School Networking Day 2025

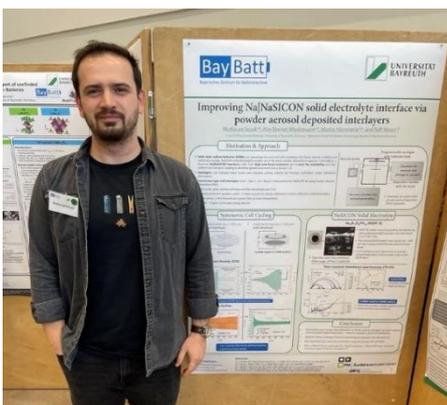

Powder Aerosol Deposition for Lithium and Sodium All Solid-State Batteries

The BayBatt Graduate School Day, which took place on November 19 at the University of Bayreuth, was well attended. Twenty-eight doctoral students presented their findings to nearly sixty participants.

Lukas Hennerici titled his presentation: „The Powder Aerosol Deposition Method as a Processing Method for Lithium-Based Solid-State Batteries”.

Lukas Hennerici's presentation was also awarded the shared prize for the best presentation.

This year, **Mutlucan Sozak** demonstrated how the aerosol deposition method can improve NaSiCON solid-state batteries.
