

## First Meeting in presence in 2022

# Stefanie Walter presented her latest results on the SAE World Congress in Detroit

After the covid pandemic prevented a personal exchange at international conferences in the past two years, the SAE WCX™ World Congress Experience in Detroit, USA, the world's most important automotive conference, took place again in presence from April 5 to 7, 2022.

The Department of Functional Materials and BERC were represented there by Ms. Stefanie Walter. She presented her research on RF-based monitoring of exhaust aftertreatment systems with the paper "Combined Ash and Soot Monitoring in GPFs with a RF-based sensor".
